

KHD RIP

DRIP EMITTERS

ADD ON KIT FOR THE

♥ HEART OF THE GARDEN

The Take Apart Emitter works well for individual plants or use three or four around a tree or large shrub.

Kit Includes:

(50) DTA1
1 gph Take Apart Emitters

(1) 1450- 50' of 1/4" tubing

(20) SS3 Hold
Downs

(50) 14BUG
Bug Plugs

(2) ELT- Easy Loc Tees

(2) CF8
Figure 8 Ends

Instructions:

1. Stake down your mainline tubing (from the Heart Kit) close to the plants you want to water.
2. Using the punch in your Heart Kit, punch a hole near each plant and insert a DTA1 emitter, beveled end first (the flag end is the outlet).
3. If the plant is too far away from the mainline, attach a length of 1/4" tubing to the outlet of the DTA1 and run it out to the plant.
4. Insert a bug plug (14BUG) in the end of the 1/4" tubing. Water will flow out around the bug plug.
5. Stake down the 1/4" tubing as necessary with the SS3's provided.
6. There are two Easy Loc Tees in this kit that allow you to run two perpendicular lines of 1/2" mainline tubing (provided in the Heart Kit).
7. Turn your water on and check the wetting patterns.
