

# KHJET MINI JETS

## ADD ON KIT FOR THE ♥ HEART OF THE GARDEN

These sprayers offer a fine 180° spray that can effectively water narrow or winding planting areas. Each sprayer is a half-circle with a 3½ foot radius providing 13 gallons per hour.

**Kit Includes:**

---

**Instructions:**

1. After the mainline tubing from the Heart Kit has been laid out and staked down, determine where you want your sprayers. The SEZ stakes provide you with 3' of tubing.
2. Put the stake in the ground and run the tubing connected to the stake back to the mainline.
3. Where it meets, punch a hole in the ½" tubing with your yellow punch (Heart Kit) and insert the transfer barb at the end of the SEZ stake tubing.
4. Thread a mini-jet into the top of the SEZ tubing using the hex hole at the end of the yellow punch as a wrench.
5. When all the sprayers are situated, turn the water on and check the wetting pattern.
